The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filled, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the rewinding without a deflecting roller must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3765

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 1, 5-8, 14, and 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ulbrich et al (6192560) in view of Beerli et al (5628098).

Ulbrich teaches a method and apparatus for rewinding a thread group on a cone-type warping machine (Figure 1), comprising a warping drum mounted in a warping stand, a warp beam in a beaming stand, while maintaining a tension in the thread group from warping drum vertex to warping beam vertex by braking the warping drum via multiple brake grippers and disc brakes as needed (Column 3, lines 19-23), the warping stand and the beaming stand being displaced axially parallel in relation to on another during rewinding. While Ulbrich essentially teaches the invention as discussed above, he fails to specifically teach supporting the warping stand and the beaming stand directly or indirectly relative to one another in order to compensate for thread group tension. Beerli teaches that it is well known to support warping and beaming stands relative to one another (Figure 1 shows both being mounted on the same block, thus supported relative to one another). It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to utilize such a support system, so as to enable better control over the stands in relation to one another. The ordinarily skilled artisan would have known this and appreciated the stability it would provide to the system, thus allowing for a higher quality wind. In regards to an emergency stop, all warping machines have an emergency stop, and the ordinarily skilled artisan would know when to activate such a stop, including but not limited to, excessive thread tension.

Art Unit: 3765

4. Claims 2 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ulbrich in view of Beerli as applied to claims 1, 5-8, 14, and 16-18 above, and further in view of Baba.

The combination of Ulbrich in view of Beerli essentially teaches the invention as detailed above, but fails to specifically teach mounting a warping drum stand on rails, which Baba teaches as well known (Figure 4). It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to utilize such a rail arrangement, so as to enable the drum to move, allowing for wind up of the threads in a controlled manner. The ordinarily skilled artisan would have understood how such an arrangement worked, and would have known to use such.

Allowable Subject Matter

- 5. Claims 3, 4, 9-12, and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shaun R. Hurley whose telephone number is (571) 272-4986. The examiner can normally be reached on Mon Fri, 6:30 am 3:00 pm, off second Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John J. Calvert can be reached on (571) 272-4983. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 3765

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
